Technology skills for K-12 students have never been more important with children across America relying on video conferencing and online learning platforms to access their education. Blind and visually impaired students, who already struggle to access basic technologies in the classroom, are now at greater risk of falling further behind academically.

We need your help.

Perkins School for the Blind is engaging with educators around the country to establish a national set of standards for technology skills for students who are blind or visually impaired.

We need the general education perspective in this dialogue.

What’s needed?

- Experience in teaching and using tech skills in the classroom (K-5 or 6-12).
- Knowledge of tech standards for typically sighted students.
- Roughly 5-10 hours of your time over the next several months to engage in online discussions with our steering committee.
