

Data Sheet: Braille Number Recognition

Student: Joe

Year: 2013

Circle the correct responses and mark a line through incorrect responses. Mark the percent correct at the bottom. To see a graph of the student's progress, in each column, draw a square around the number that represents the percentage correct; then connect the squares with a line. The "1" through "10" represents both the number of trials on a given day and the percent correct.

Prompt: "What number?" (on the card)
